②用 (agrange对偶解钱性可分SVM

由3 Dual -这时凸低低问题, 所以把 primal 转化为Dual 求解

老龙 min L(12.6) ; 对成, 5 成分了

$$\begin{cases}
\overrightarrow{w} - \sum_{i=1}^{m} \alpha_i y_i \overrightarrow{x_i} = \overrightarrow{o} \\
\sum_{i=1}^{m} \alpha_i y_i = o
\end{cases}$$

把上面=式代入 L(W.b.3) 得.

$$\begin{array}{ll}
\text{min } L(\vec{w}.b.\vec{3}) = \sum_{i=1}^{m} d_i - \pm \sum_{i=1}^{m} \sum_{j=1}^{m} d_i d_j y_i y_j \langle \vec{x}_i . \vec{x}_j \rangle \\
\text{s.t.} \quad \sum_{i=1}^{m} d_i y_i = 0 \quad \forall i \geq 0
\end{array}$$

· Dual 问题可以化为下面形式

$$\min_{\substack{X \in X_i \\ X_i = 1 \\ X_i = 1}} \frac{1}{2} \sum_{i=1}^{m} \sum_{j=1}^{m} d_i d_j y_i y_j < \widehat{x}_i | \widehat{x}_j > - \sum_{i=1}^{m} d_i d_i$$

$$\begin{cases}
S.t & \sum_{i=1}^{m} d_i y_i = 0 \\ i=1
\end{cases}$$

$$\begin{cases}
A_i & X_i = 0 \\
A_i & X_i = 0
\end{cases}$$
